

Research-Use-Only Peptide Programs

Website, marketing, fulfillment and customer-communication standards for domestic research chemical sellers

Domestic (U.S.) programs

Version 1.1 · August 2026

10 sections · 52 standards

This reference collects the standards that research-use-only (RUO) peptide sellers are expected to meet across their website, their marketing, their fulfillment process and their customer support. **The common thread is simple:** nothing a seller publishes, ships, posts or says may present a research compound as something a person is meant to take.

WHAT THIS IS

A plain-language summary of the compliance expectations applied to RUO peptide programs, organized so a merchant can work through it section by section and see where their site stands today.

WHAT THIS IS NOT

It is not an approval, a decision, or a placement. It is not written for, or specific to, any single payment processor, acquiring bank or sponsor, and it is not legal advice.

The governing principle

Regulators do not read a website one page at a time. They read the whole picture — product names, category labels, social posts, packing slips, support replies, even what you sell alongside the peptide — and ask a single question: **does this seller know the buyer intends human use?**

A compliant disclaimer cannot rescue a site whose product names, imagery, accessories or Instagram feed answer that question the wrong way. Every standard below exists to keep that answer consistent.

CONTENTS

- | | |
|--|--|
| 1 Site Access & Account Creation | 6 Off-Site Marketing & Social Media |
| 2 Site-Wide Disclosure | 7 Restricted Products & Accessories |
| 3 Product Pages & Technical Data | 8 Order Screening, Shipping & Fulfillment |
| 4 Product Naming & Categorization | 9 Customer Communications |
| 5 Claims & Content Restrictions | 10 Payments & Commercial Practices |

01 Site Access & Account Creation

*Qualify the visitor before
a single product is visible.*

Access control is the first thing a reviewer looks at. **No product, price or catalog page may be reachable by an unqualified visitor** — the gate comes before the storefront, not at checkout.

Age gate before any product is visible	Every visitor must be stopped at the door and affirm they are 21 or older. This happens before products can be viewed — not at checkout.
Registered accounts before shopping	Before shopping for or purchasing any product, a visitor must set up an account, provide the institution they are affiliated with, and electronically acknowledge that everything sold on the site is intended for research use.
Guest checkout disabled	There is no anonymous path to purchase. Guest checkout must be turned off entirely.
Signed terms at signup	The user must actively check “I Agree” against the complete Terms and Conditions. Until they do, account creation cannot proceed.
What the terms must contain	Five points, at minimum: use is restricted to research; human consumption is forbidden; the products play no part in diagnosing, treating or preventing any disease; the buyer indemnifies the seller; and the buyer confirms they are a qualified professional.
Research institution selector	When the account is established, the buyer must identify their research status. This is a required field — never optional.
Field mechanics	Implement it as a required dropdown, checkbox, radio button or text input. It cannot be bypassed at checkout.
Field label	Label the field exactly as written: USE THIS LABEL Field of Qualified Research (required for account set up and purchase)
Example options	● Pharmacology / Drug Discovery ● Biochemistry & Molecular Biology ● Academic Research ● Contract Research Organization (CRO) ● Analytical Chemistry Laboratory ● Other Qualified Research (specify)
Record keeping	The selected research field must be stored with every order in your database, not just captured at signup.

02 Site-Wide Disclosure

One sentence, every page, always readable.

Global footer disclaimer — required on every page

This sentence belongs in the footer of **every single page**, set in a legible size. It may not be hidden, shrunk past readability, or tucked inside a collapsed element.

EXACT DISCLAIMER TEXT

For research and laboratory use only. Not for human or animal consumption.

03 Product Pages & Technical Data

A product page is a spec sheet, and nothing more.

Every product page must carry **only chemical and scientific information**. No health claims, no dosing instructions, no therapeutic context of any kind.

CAS number	The compound's exact CAS registry number.
Molecular formula	For example, C ₆₂ H ₉₈ N ₁₆ O ₂₂ for BPC-157.
Molecular weight	Expressed in g/mol.
Purity	A minimum of 98% purity for all products , and every purity figure must be backed by a Certificate of Analysis.
Storage conditions	For example, "Store at -20°C, desiccated."
Batch-specific Certificate of Analysis	Each product page must link to the COA for the current batch , issued by an accredited independent third-party testing laboratory. The COA must identify the batch or lot number, the testing date, the compound identity, the purity percentage, and the method used (HPLC preferred).
Keeping COAs current	Refresh COAs at least every 60 days. When a new batch arrives, update immediately rather than waiting for the cycle.

04 Product Naming & Categorization

Names carry intent. Chemistry only.

Name each product with **the compound's precise chemical name or its formula** — nothing else. Marketing names, consumer-facing language and branded terminology are all out.

Use the proper chemical name	COMPOUND	NAME IT AS
	BPC-157	Body Protection Compound 157 (Pentadecapeptide)
	TB-500	Thymosin Beta-4 Fragment
	Semaglutide	Semaglutide — never "Sema" in marketing

No pharmaceutical brand names	Ozempic, Wegovy, Mounjaro, Zepbound and Rybelsus are off limits, as is every other brand name. PROHIBITED
No abbreviations or nicknames	Refer to GLP-1 products by chemical name or internal code only — “Semaglutide,” “Tirzepatide.” Never “Sema,” “Tirz,” or similar shorthand. PROHIBITED
No marketing terms in product names	Names such as “Lean Stack,” “Mass,” “PCT,” “CagriLean,” “Wolverine Peptide” or “Healing Stack” are not permitted. PROHIBITED
No therapeutic categories	Products cannot be filed under categories such as “Weight Loss,” “Obesity,” “Longevity,” “Cognitive Enhancement,” “Joint Healing” or “Anti-Aging.” PROHIBITED
No route-of-administration labels	Products cannot be labeled “injectable” or “nasal spray.” These describe how a person would take the product, which makes them administration route claims. PROHIBITED

05 Claims & Content Restrictions

Applies to every word you publish anywhere.

No disease claims	Nothing on the site may state or imply that a compound treats, cures, prevents or diagnoses a disease or condition of any kind.
No dosing instructions — ever	Never publish dosing information of any kind: milligram amounts, frequency, route of administration, or injection schedules.
No study citations supporting benefit claims	Research papers may not be cited or linked, and neither may off-site material of any kind, where doing so would suggest a benefit to a person or point toward human use.
No testimonials or outcome stories	Do not post testimonials, before-and-after photos, recovery stories, or user reviews that describe health outcomes.

06 Off-Site Marketing & Social Media

The highest-risk area in the entire program.

Social channels are policed as closely as the storefront. Regulators watch Instagram, Facebook, TikTok and X for posts that contradict the disclaimers a seller publishes on its own site, and **a human-use claim made on a social account counts against the seller no matter how carefully the website itself is worded.**

One rulebook everywhere	Whatever the channel, a post lives under the product-page rules — naming, claims, categories and disclaimers all carry over.
No influencer marketing	No paying influencers, and no trading product or perks for promotion. PROHIBITED
No affiliate program	Do not operate an affiliate or referral program. PROHIBITED

No sponsored content	Do not buy sponsored placements that describe these compounds or their use in people. PROHIBITED
Link policy	From social profiles and posts, link to the site's home page and nowhere deeper.
Periodic audits	Sweep every channel at least once a month, and act on any post found carrying human-use language.
Monitor brand mentions	Standing brand alerts — Google Alerts plus social listening — are the recommended practice. When outsiders post about people using your products, issue cease-and-desist notices and keep a record of each one.

07 Restricted Products & Accessories

Some items signal human use no disclaimer can undo.

A handful of items point so directly at human use that **no amount of disclaimer language breaks the connection**. Keep them off the site entirely — not as add-ons, not bundled, not as standalone listings.

Needles and syringes	Offering injection supplies next to peptides is itself evidence of intended injection. PROHIBITED
Alcohol wipes	Their obvious purpose is preparing an injection site, which places the sale in a human-injection context. PROHIBITED
HCG and HGH	Human Chorionic Gonadotropin and Human Growth Hormone both require prescriptions. PROHIBITED
Tablets and pills	Oral dosage forms are not permitted. PROHIBITED
Capsules	Capsules may be sold only where they are exclusively for research use and properly labeled, listed with chemical names and CAS numbers only. Anything short of that is prohibited. PERMITTED WITH LIMITS
Reconstitution solution	Bacteriostatic water is permitted when it carries the label "Reconstitution Solution for Laboratory Use." Keep injection language off the listing, and attach no pharmaceutical brand names such as Pfizer or Hospira. PERMITTED WITH LIMITS

08 Order Screening, Shipping & Fulfillment

Where a package goes is evidence of what you knew.

Shipping restrictions and customer screening	Decide deliberately who receives shipments and where they go. A destination such as a gym, a med-spa or a weight-loss clinic reads to regulators as proof the seller knew the compound was headed for a person.
Geographic restriction	Domestic addresses only. No PO boxes, and nothing crossing the border.

Adult signature on first orders	Every first-time customer order must require an adult signature on delivery, with 21+ confirmed.
Packing slip disclaimers	Include the research-use-only disclaimer and the research-professional acknowledgement in the shipment itself.

09 Customer Communications

Zero tolerance for human-use language.

This standard covers **every channel** — your FAQ and site copy, email, live chat, phone, and social media direct messages. Support staff need the script below and the authority to use it.

Never provide use guidance	No dosing advice, no administration guidance, and nothing a reader could take as instruction for using a drug — in any channel, by any staff member.
The acceptable answer	When a customer asks how to use a product, the response is: APPROVED RESPONSE We are a research chemical supplier. We cannot provide dosing, administration, or usage advice. Our products are for research use only.
No medical or research consultation	Staff must never offer to help a customer “figure out” a protocol.
Permanent ban policy	Keep a live ban list. A customer who so much as hints at human consumption is removed for good, with no appeal, and the reason is written down.

10 Payments & Commercial Practices

How you take money is itself a compliance signal.

Card acceptance through a compliant merchant account	Card payments must run through a legitimate merchant processor that performs proper KYC. How a seller collects money is read as evidence of how the business is run.
Peer-to-peer payment apps are a red flag	To an investigator, a seller collecting through Venmo, Cash App, Zelle or PayPal Friends & Family looks like one sidestepping the fraud controls that come with a standard merchant account.
Documented refund and chargeback policy	Publish a refund and chargeback policy, clearly written and easy to find.

A closing note on consistency. Most programs fail on the seams rather than the substance — a compliant catalog with a legacy category page still named “Weight Loss,” a clean product page linked from a three-year-old Instagram post, a support agent answering a dosing question helpfully. Work the sections above as a system, and re-run the self-check whenever the catalog, the site navigation or the support team changes.

✓ Self-Check Before You Launch or Relaunch

A working summary of the same standards.

Nothing new appears below — this is the ten sections restated as a walkthrough, so a team can confirm each item against a live site in one pass.

ACCESS & ACCOUNTS

- ☐ 21+ age affirmation fires before any product is visible
- ☐ Account required before shopping; institution captured
- ☐ Guest checkout is off
- ☐ "I Agree" on full Terms blocks account creation
- ☐ Terms cover all five required points
- ☐ Research field is required and labeled exactly as specified
- ☐ Selected research field is stored on every order

NAMING & CLAIMS

- ☐ All names are chemical names or formulas
- ☐ No pharmaceutical brand names anywhere
- ☐ No abbreviations such as "Sema" or "Tirz"
- ☐ No stack names or marketing terms
- ☐ No therapeutic category navigation
- ☐ No "injectable" or "nasal spray" labels
- ☐ No disease claims, dosing, benefit citations or testimonials

PRODUCTS & FULFILLMENT

- ☐ No needles, syringes or alcohol wipes listed
- ☐ No HCG, HGH, tablets or pills
- ☐ Capsules, if sold, are research-labeled with CAS only
- ☐ Bacteriostatic water labeled for laboratory use, unbranded
- ☐ Domestic addresses only; no PO boxes, nothing international
- ☐ Adult 21+ signature on all first-time orders
- ☐ Packing slips carry RUO and professional acknowledgement

DISCLOSURE & PRODUCT DATA

- ☐ Exact footer disclaimer on every page, legible and uncollapsed
- ☐ Product pages carry technical data only
- ☐ CAS, formula, molecular weight and storage listed
- ☐ All products at 98% purity minimum
- ☐ Current batch COA linked from each product page
- ☐ COAs refreshed within the last 60 days

MARKETING & SOCIAL

- ☐ Social posts audited against product-page rules
- ☐ No influencer, affiliate or sponsored arrangements
- ☐ Social links point to the home page only
- ☐ Monthly channel review scheduled and logged
- ☐ Brand alerts running; cease-and-desist process documented

SUPPORT & PAYMENTS

- ☐ Approved response scripted for all support channels
- ☐ No staff protocol guidance, in any channel
- ☐ Ban list active, enforced and documented
- ☐ Cards processed through a KYC-compliant merchant account
- ☐ No Venmo, Cash App, Zelle or PayPal Friends & Family
- ☐ Refund and chargeback policy published
